

THE FLUORIDE DEBATE

The Queensland Government nor their sub-division of Councils have any mandate, whatsoever to mass medicate the population of our beautiful State by introducing Fluoride to our water supply. The Queensland Government is in error and it is now our responsibility to point out this error and determine the will of the Sovereign People.

Fluoride is a thyroid poison and because so many are so heavily exposed already to halogens, the need for iodine supplementation is vastly increasing. There are actually four halogens: iodine, bromine, fluorine, and chlorine, and we already have chlorine in our water. All these halogens use the same receptors in the body. Therefore if a person's diet is deficient in iodine the iodine receptors in the thyroid and stomach, for example, may fill up with bromine, which is common in grains, bleached flour, sodas, nuts, and oils as well as several plant foods. Iodine is depleted by bromine, which is used as a spray on fruits and vegetables, in baked goods, as a fumigant, and in Prozac, Paxil, and many other pharmaceutical drugs. Chlorine, fluorine, and fluoride are chemically related to iodine, and compete with it, blocking iodine receptors in the thyroid gland. Iodine is massively important to the thyroid.

Are you a big tea drinker? You are already getting heaps of fluoride as tea leaves accumulate more fluoride from our polluted soil and air than any other edible plant. The total daily intake of fluoride for every individual is different, accumulated fluoride is an extreme health hazard.

Do you breathe our air? of course you do. Did you know Sulphur hexafluoride levels have increased in our atmosphere by two orders of magnitude since 1970.

In my opinion, there is a massive commercial interest driving the research and fluoridation debate for "Yes". You owe it to the only one responsible for your health, and that's you, to become proactive and research the non-commercial truth about fluoride and indeed your entire health journey.

We can do something about the charging fluoride bull if you don't want it in our water. Please go to www.stimaging.com.au/mandate.html, download the mandate form and help the rest of the lateral thinking sovereign people send a MANDATE to our elected Government so they are clear about the will of the people.
